

COMPARING RETIREMENT PLAN DESIGNS

January, 2008

We are often asked to help companies design their retirement programs, given certain goals and objectives. Usually we find the employer is willing to spend a certain amount on staff cost, assuming sufficient company profits. Then a frequent question pertains to how much can be deferred for the owners, or other highly compensated employees, on a pre-tax basis.

When we help design a plan, we look at objectives, the need for flexibility, ages of the key personnel, salaries of everyone involved, total budgeted dollars, the advantages of adding 401(k) features, etc.

Attached are the results of an analysis we prepared for one company that wanted a defined contribution plan. There were 10 people eligible for the retirement plan, including one owner.

We explained that we could consider “permitted disparity.” This recognizes that the company’s Social Security tax paid on behalf of the owner is a lesser percent than it is for the other employees. Consequently, we can make up for this by having their private industry plan give a higher contribution percent to the owner.

We could also consider age-weighting since the owner was older than most, but not all, of his employees. Considering 401(k) features, we could have a catch-up contribution for the owner, since he was over age 50. Also, by looking at 401(k) safe-harbor features, we could allow the owner to defer the maximum, even if his employees choose not to utilize the plan.

Also, due to ages, and the owner’s preference for giving all non-owners the same percent company contribution, we looked at “cross-testing” (also known as “new comparability”).

The owner was willing to contribute 5% of pay for his eligible staff. After looking at seven different designs, we sorted the results based on what we could do for the owner. The various designs resulted in total owner contributions that varied from \$11,500 to \$51,000, based on the compensation cap and contribution limits applicable for the year 2008. In other words, there were far more dramatic differences in the results than the owner thought possible. It’s just a matter of considering all the various rules and regulations applicable to qualified retirement plans.

Employers and their advisors should recognize that there is much more room for design enhancement than there was 10 to 20 years ago. Don’t assume that the simplest design is always the best!

COMPARING RETIREMENT PLAN DESIGNS

Here is an example showing the results of comparing seven plans for a small business. The owner was willing to spend on staff an amount equal to 5.0% of their total combined payroll. In this case, a cross-tested plan with 401(k) safe-harbor features was the best design. The results show the differences that can be obtained from various plan designs. The best design for any given situation will vary depending on employee ages and salaries, as well as company objectives.

Plan:		A	B	C	D	E	F	G
Description:		Pro Rata Comp without 401(k)	Using Permitted Disparity without 401(k)	Age- Weighted without 401(k)	401(k) Safe- Harbor with Permitted Disparity	Cross- Testing without 401(k)	Age Weighted with 401(k) Safe- Harbor	Cross- Testing with 401(k) Safe- Harbor
<u>Employee</u>								
Pay	Age							
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
230,000	50	11,500	17,900	23,541	34,560	38,180	44,041	51,000
60,000	42	3,000	3,000	3,197	3,000	3,000	3,197	3,000
60,000	40	3,000	3,000	2,716	3,000	3,000	2,716	3,000
55,000	42	2,750	2,750	2,931	2,750	2,750	2,931	2,750
50,000	36	2,500	2,500	1,633	2,500	2,500	1,633	2,500
49,000	30	2,450	2,450	1,470	2,450	2,450	1,470	2,450
47,000	38	2,350	2,350	1,807	2,350	2,350	1,807	2,350
46,000	51	2,300	2,300	5,108	2,300	2,300	5,108	2,300
25,000	26	1,250	1,250	750	1,250	1,250	750	1,250
15,000	41	750	750	737	750	750	737	750
Grand totals		31,850	38,250	43,890	54,910	58,530	64,390	71,350
Percent of total to Owner		36%	47%	54%	63%	65%	68%	71%
Average contribution to non- owners as a percent of pay		5.0%	5.0%	5.0%	5.0%	5.0%	5.0%	5.0%

Assumptions

- 1 Illustration uses the 2008 comp cap of \$230,000, the contribution cap of \$46,000, and the catch-up contribution cap of \$5,000.
- 2 Plans B and D assume the integration level is the 2008 Social Security taxable wage base of \$102,000.
- 3 Illustrations conservatively assume non-owners contribute nothing to any plan with a 401(k) provision.
- 4 The plan is top-heavy, meaning over 60% of the assets are attributed to Key Employees. Consequently, there is a 3% top-heavy minimum contribution for each non-key employee.
- 5 The safe-harbor contribution is the 3% non-elective contribution in Plans D, F, and G.
